

### **Exercise 31: Community Based Problem Solving**

In our service learning project we engaged with a “community” to collaboratively collect samples that may or may not contain lead and chemically analyze those samples. At this point in time you are asked to

1. Identify the stakeholders in the process. These stakeholders may or may not be “people”.
2. Identify the values involved in the process.
3. Did the class engage ethically with each of the stakeholders? Why or why not?
